Care Instructions and Guarantee Information

***SOD** (normally) – Water newly installed sod for ½ hour every other day for the first 2 weeks. If extreme dry weathers is occurring, water daily for 2 weeks. After this period water 2 times a week for normal water restriction schedule. If small yellowish circular spots occur in new grass, contact your pest control company to spray with fungicide as soon as possible. Fungus is a common problem due to the extra watering, especially in the winter months. Do not cut grass for 2 weeks to let the roots establish. Fertilize in March and October. *Sod is not covered under guarantee due to environmental issues, such as bug/fungus and improper watering, which is out of our control.

***ANNUALS** - Water new annuals daily for the first 2 weeks, 2-3 times a week thereafter, allow for change of weather conditions. Fertilize every 2-3 months with Osmocote. **Remember – annuals only last generally through 1 season or 4-6 months. *They are not covered in our guarantee due to being seasonal.

PLANTS UNDER GUARANTEE

GROUND COVERS – Water daily for the first 2 weeks, 2-3 times a week thereafter. Fertilize every 3 months with Osmocote or use Lesco 12-2-14 or 13-3-13 (sparingly).

SHRUBS/ORNAMENTALS/HEDGE MATERIALS – Water daily for the first 2 weeks, 2-3 times a week thereafter. Fertilize during the months of March, June and October with 13-3-13, 8-10-10 or 12-2-14 (recommended). Inspect monthly for bug problem, disease or anything unusual. *Call if plants are starting to look sick.

PALMS/SHADE TREES – Heavily water for the first 2 weeks, twice a day during any dry, hot seasons, 3-4 times a week thereafter. Fertilize during the months of March, June and October with Lesco 12-2-14 or 12-3-13 according to directions. Additionally fertilize with Maganese Sulphate once a year for prevention of frizzle top in Queen, Robellini, Royal and Sago Palms. Apply straight Magnesium for any yellowing of your palms as needed.
